WORK EXPERIENCE

Software Development Engineer New York, NY
Amazon Web Services *March 2023 - Present*

- Launched the CFN LSP Server for the AWS Toolkit IDE Plugin to aid users in CFN Template authoring and stack management
- Implemented the stack validation and deployment features for the plugin, and created canary tests for service monitoring
- Expanded CFN IaC Generator to nine additional regions including ap-southeast-7, improving availability and reducing latency
- Mentored intern project for an open-source MCP Server that facilitates user interaction with Cloudformation APIs
- Designed and implemented a multi-tenant, event-driven data pipeline that serves customer data to entire AWS organization

Software Development Engineer Intern Arlington, VA
Amazon Web Services *June 2022 - August 2022*

- Implemented a new feature for an internal Java REST API lambda to validate Salesforce customer data in real-time
- Consulted with API customers and stakeholders to establish project scope, including stretch goals and future work
- Completed feature design document, receiving feedback from senior engineers to improve feature robustness
- Demonstrated newly-created feature to over 35 project managers and engineers, using feedback for final adjustments
- Launched feature in production following lower environment testing, providing the feature to thousands of users

Technology Intern Wilmington, DE
M&T Bank Corporation *June 2021 - August 2021*

- Developed a C# CLI application to help migrate over 60 company databases to cloud-based Microsoft Azure SQL Database
- Leveraged the Dragonfruit package to enhance CLI experience to Database Administrators in the organization
- Integrated with Microsoft Data Migration Assistant to document migration blockers in JSON format
- Presented application to users to receive feedback and implement improvements
- Won first place in intern-wide App Development Contest by creating a blockchain-driven COVID-19 vaccine record tracker

PROJECTS

Malware Analysis Tool (M.A.T.) Newark, DE
University of Delaware Capstone Design Program *September 2022 - May 2022*

- Designed and implemented a cross-platform ML-driven application that identifies malware with over a 95% success rate
- Created machine learning model with scikit-learn and WEKA, training the model with malware repositories

TECHNICAL SKILLS

- **Programming Languages**: Java, Kotlin, Python, TypeScript, JavaScript, C#, C, CSS, C++, HTML, SQL, Solidity, Bash Scripting
- **AWS**: Lambda, CloudWatch, Cloudformation, DynamoDB, S3, EC2, Glue, VPC, SageMaker, ECS with Fargate, Kinesis, SNS, SQS
- **Tech Stacks and Frameworks**: MERN (MongoDB, Express, React, Node), Angular, .NET with Microsoft SQL Server
- **Libraries and APIs**: VS Code API, vscode-languageserver-node, tree-sitter, pandas, AWS SDKs For Java and TypeScript, Boto3

EDUCATION

University of Delaware College of Engineering Newark, DE
Master of Science: Cybersecurity with concentration in Security Analytics February 2021 - December 2022
GPA: 3.9
Relevant Coursework: Secure Software Design, Data Search and Data Mining, Cloud Computing, Artificial Intelligence

University of Delaware Honors College of Engineering Newark, DE
Bachelor of Engineering: Major: Computer Engineering, Minors: Cybersecurity, Computer Science August 2018 - May 2022
GPA: 3.9, cum laude
Relevant Coursework: Data Structures, Operating Systems, Web Applications Security, Computer Networks
